

Upcycled Denim Herringbone Pillow with Blair Stocker of Wise Craft Handmade Supply List

- Denim fabrics: The success of this project relies on having several shades of denim fabric available for the front panel. A good target is 10 different shades of denim. More is fine, but try and have at least 8. (For size reference, a scrap of denim measuring around 3" x 6" will give you one piece for your pillow.) You will need 40-45 pieces for the front pillow panel.

Tips as you gather your denim-

- Swap with other friends who are taking the workshop
 - The back of the denim may give you another shade option- that counts!
 - Your denim fabrics may have stretch in them and that's ok.
 - All your denims should be a similar weight for best results.
- Two pieces of denim approximately 14" x 21" for the back of the pillow.
 - 20" pillow form
 - Rotary Cutter/Cutting Mat
 - Sharp Fabric Scissors
 - Quilting Rulers-
 - A right angle Triangle ruler- I'll be using this one in class to cut our strips- Omnigrd #96L- <https://amzn.to/3HFyjbW> (*see note below)
 - A long ruler for trimming the long strip columns we'll make (I use a 24" long one like this one <https://amzn.to/3DoL9IQ>)
 - Sewing Machine with Navy thread in top and bobbin and a denim needle
 - Iron/ironing surface

Optional- A seam roller is great for helping to press seam allowances open and flat.

* If you do not have this ruler available to you for the workshop, you will need a sheet of template plastic.
